EDUCATION

Coding Boot Camp
University of Denver

01/2022 - 05/2022

Denver, CO 4.0 GPA

Bachelor of Arts, Philosophy
Union University

07/2010 - 04/2014

Jackson, TN 3.5 GPA

PERSONAL PROJECTS

Elden Market (04/2022 - 05/2022)

- Worked on a team of four to build a full stack MERN application in one week using Javascript, Mongo, GraphQL, React, Bootstrap, Node.js, and Express.js.
- We made an ecommerce site for Video Game enthusiasts that was specifically tailored for items, weapons, armor, etc found in the game Elden Ring.
- My job was to focus on the back-end Javascript, creating the functionality of the app, as well as the resolvers and type-defs in order to communicate with our GraphQL database.
- Lead API development lifecycle including database architecture, security, middleware, and user authentication through Json Web Tokens.

Ted Lasso Sports Page (03/2022 - 03/2022)

- Worked with a team of four to build an application in a week that would use Node and Express to create restful API calls, Handlebars.js for the template engine, and MySQL and Sequalize ORM for the database.
- Our project was designed to be a sports team page, full of roster information for the fictional team "Richmond AFC."
- My job was to seed our database with the staff and athletes information and create the restful API calls in order for the site admin to update stats and info as needed.

Weather Dashboard (02/2022 - 03/2002)

- One of my favorite personal projects that I was tasked with creating in three days.
- Used the OpenWeather One Call API to retrieve weather data.
- Used CSS and Bootstrap to style my page.
